OBJECTIVE:

A full-stack developer with 4 years of experience in PHP, Laravel, and modern JavaScript frameworks, seeking a position to utilize my skillset and abilities in an organization that offers a competitive environment to put my acquired knowledge to use and gain exposure to upcoming technologies while being innovative and flexible.

PROFILE IN BRIEF:

- Bachelor of Computer Applications (BCA), 2019, from Nesamony Memorial Christian College, Marthandam (Manonmaniam Sundaranar University, Thirunelveli).

Having experience in the development of full-stack web applications, REST APIs, and business platforms using PHP, Laravel, CodeIgniter 3, React.js, Next.js, Node.js/Express.js, and Python/FastAPI, with MySQL, PostgreSQL, MongoDB, and Redis on the database side. Comfortable working across the stack — from database schema and query optimization to reusable front-end components — and have shipped RBAC and authentication systems, third-party integrations (Twilio Voice API, Stripe, Google OAuth, Google Gemini AI API), and Docker-based deployments.

EMPLOYMENT DETAILS:

- Worked at Aparajitha Software Services Pvt Ltd, Madurai, as Specialist Engineer, Jan 2025 to Jun 2026.

Project Details:

Description: Built and maintained full-stack applications with PHP, Laravel 8, React.js, Next.js, Node.js, and MySQL, working across the full request lifecycle from API to UI. Designed versioned REST APIs with role-based access control, request validation, authentication, and security hardening, and built reusable React.js/Next.js front-end modules integrated with Laravel and Node.js backend services.

Description: Optimized MySQL queries and added targeted indexes, cutting data retrieval time by about 25%. Built a browser-based click-to-call system using Twilio Voice API, Node.js/Express, and React.js for outbound calling, call-status tracking, and call logging.

Description: Set up and customized Magento 2 on Docker, resolved backend and search-indexing issues, and developed a custom Magento 2 admin module with UI Grid reporting, date-range filters, and Chart.js visualizations. Applied input validation, CSRF protection, and SQL-injection prevention across endpoints, and built responsive WordPress sites and Elementor templates for business needs.

- Worked at Azinova Technologies, Technopark, Thiruvananthapuram, as Associate Software Engineer, Oct 2023 to Nov 2024.

Project Details:

Description: Built web applications using PHP, Laravel, MySQL, JavaScript, jQuery, Bootstrap, and AJAX. Developed and integrated versioned REST APIs for web and mobile clients with structured error handling, and implemented Stripe payments — idempotency keys, webhook verification, and validated transactions across 1,000+ payments.

Description: Built responsive front-end interfaces from design mockups and wrote reusable JavaScript/jQuery components to cut down on duplicated code. Used Docker for local development, deployed applications via Vercel and Render, and took part in Agile ceremonies and code reviews.

- Worked at Novelx Technologies, Eraviputhoorkadai, as System Engineer, Jun 2022 to Sep 2023.

Project Details:

Description: Developed and maintained web applications using PHP, CodeIgniter 3, MySQL, JavaScript, jQuery, Bootstrap, and AJAX. Built login, session management, and role-based access control, and produced responsive pages using HTML, CSS, Bootstrap, JavaScript, and jQuery, with AJAX for asynchronous data loading.

Description: Optimized MySQL queries and troubleshoot issues across front end, backend, and database, and wrote Python scripts to automate repetitive tasks and speed up the team's workflow.

KEY PROJECTS:

Project Name: Buddy Invoice System — Multi-User Finance Automation Platform (Laravel 8/12, React.js, Node.js, MongoDB, Redis)

Description: Built a multi-user finance platform covering invoicing, approvals, reporting, RBAC, and audit logs. Moved heavy report generation into Laravel background jobs, cutting user wait time by about 60%, and sped up API response times by restructuring queries and adding Redis caching to high-traffic endpoints.

Project Name: JournalPilot — AI-Assisted Academic Manuscript Analysis Platform (Python, FastAPI, PostgreSQL, SQLAlchemy, Google Gemini AI API)

Description: Built a FastAPI backend that lets researchers upload manuscripts and get AI-generated readiness feedback before submitting to a journal. Integrated the Google Gemini AI model API to analyze manuscript text and return structured, validated feedback, added Google OAuth sign-in alongside JWT-based authentication, and built PDF/DOCX text extraction with a documented REST API via Swagger/OpenAPI.

Project Name: Emaild — Real-Time Slot-Based Booking Platform (HTML, CSS, JavaScript, jQuery, REST API, MySQL)

Description: Built a real-time, slot-based booking engine that checks live availability before confirming a request, with conflict-prevention logic built around MySQL transactions so two users can never book the same slot. Implemented secure authentication, role-based access control, and session management, and optimized complex multi-table MySQL queries, cutting average response times significantly under concurrent bookings.

Project Name: Day Mart — Full-Stack E-Commerce Platform (Laravel, React.js, MySQL, Stripe)

Description: Built a full-stack e-commerce platform with a Laravel REST API backend and a React.js storefront covering product catalogue, cart, and checkout. Developed RESTful APIs for mobile app integration, integrated the Stripe payment gateway with PCI-compliant transaction validation and webhook handling, and implemented caching and database indexing to keep the platform responsive under high traffic.

ADDITIONAL SKILLS:

- **Languages:** PHP, JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3
- **Backend:** Laravel, CodeIgniter 3, Node.js, Express.js, FastAPI, REST APIs, MVC, OOP, Authentication, RBAC, Middleware, API Versioning, Webhooks, Laravel Jobs/Events/Queues
- **Frontend:** React.js, Next.js, JavaScript, jQuery, AJAX, Bootstrap, Responsive Design, CSS Grid, SPA, Reusable Components
- **Database:** MySQL, PostgreSQL, MongoDB, Redis
- **Integrations:** Twilio Voice API, Stripe, Google OAuth, Google Gemini AI API, REST APIs, Webhooks
- **DevOps & Cloud:** Docker, AWS EC2, S3, RDS, Lambda, GitHub Actions, Jenkins, CI/CD
- **Platforms:** Magento 2, WordPress
- **Tools & Practices:** Git, GitHub, Bitbucket, GitLab, Postman, Linux, Agile/Scrum, Code Review, Unit Testing, Functional Testing

CERTIFICATIONS:

- Python Basics & Advanced — Networkz System
- Power BI — Great Learning
